TABLE 6: EU LIQB ON QUALITATIVE INFORMATION ON LCR, WHICH COMPLEMENTS TEMPLATE EU LIQ1

Qualitative information - Free format		
a)	Explanations on the main drivers of LCR results and the evolution of the contribution of inputs to the LCR's calculation over time	The main drivers of the LCR are the current central bank balance (HQLA), forward funding (inflows) and maturing mortgage covered bonds (outflows).
b)	Explanations on the changes in the LCR over time	The LCR was consistently above 200% over the last 12 months. Interim increases were mainly caused by the factors listed in (a) which are as a matter of course very volatile.
c)	Explanations on the actual concentration of funding sources	As a Pfandbriefbank the concentration of funding sources is primarily on mortgage covered bonds.
d)	High-level description of the composition of the institution's liquidity buffer.	The liquidity buffer contains predominantly level 1a assets, i.e. central and regional government assets.
e)	Derivative exposures and potential collateral calls	The potential collateral calls remain at a constant level.
f)	Currency mismatch in the LCR	Both the liquidity buffer and the outflows consist mostly of EUR positions.
g)	Other items in the LCR calculation that are not captured in the LCR disclosure template but that the institution considers relevant for its liquidity profile	The LCR of Muenchener Hypothekenbank eG is very volatile. This is not due to unexpected changes in an LCR component, but mainly to large-volume Emissions. However, due to the institution's deterministic cash flow profile, the LCR can be forecasted and taxed very precisely.
